

- 1) The radio spectrum MUST be protected from forms of interference caused by emerging technologies.
- 2) Amateur radio is a source of equipment and skills that have always been an asset to our nation, particularly in emergency situations.
- 3) The amateur spectrum has been significantly eroded over the years. This is the result of harmonic and sometimes fundamental radiation generated by the never ending array of electronic appliances.
- 4) The implementation of broadband internet using the electric lines as the transmission source, will cause irreparable harm to the amateur radio service. Implementation of this system would without any question seriously degrade the private sector radio spectrum to the extent that it is rendered useless.
- 5) The FCC is mandated with the responsibility to administer and regulate the radio spectrum in this nation. Failure to deny broadband internet using the electric lines would be a breach of that mandate. More than that, failure to deny the service will create and foster a "Pandora's Box" of electronic interference.
- 6) For the greater good of this nation, 03-104 must be denied.
